

AMENDMENTS TO THE SPECIFICATION

Please amend the specification beginning on page 31, line 16, as follows:

FIGURES 1 and 2 illustrate one embodiment of a shower assembly 100 formed in accordance with the present invention. Generally stated, the shower assembly 100 includes plumbing 104 and 106 for transferring shower water from a water source (not shown) to a nozzle 33, wherein the plumbing 104 and 106 is hidden from view below a surface 13 (or mounting member) and within a building element 30, to which the nozzle 33 is attached. The plumbing 104 and 106 are also known as first and second conduits, respectively. The shower assembly 100 includes a connection assembly 102 which permits the coupling of the building element 30 to the surface 13 in a quick connect manner while permitting the plumbing 104 and 106 to pass hidden from view between the surface 13 and the building element 30 through the connection assembly 102.
